

PART # DZLOBE101WHT

LightOn by DreamZon - Datasheet

What is LightOn?

LightOn is new innovative product allowing light notification for incoming SMS or Voice/Video calls.

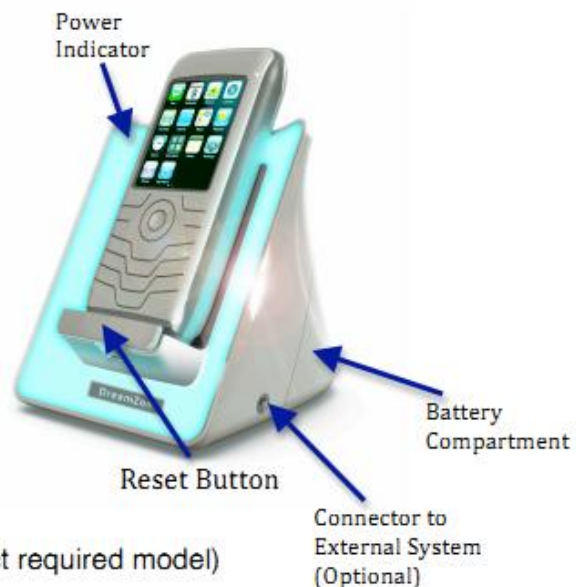

LightOn could be used by anyone! Thanks to its cool design, variety of colors, and compatibility with any mobile phone, it addresses everybody's needs.

How does it work?

LightOn is intended for indoor use, including mainly home and office.

Please follow the instructions below -

- 1) LightOn operates on batteries. Open the back batteries cover and insert three AA 1.5V batteries, in the right direction, as indicated. Close the battery cover.
- 2) One of the LEDs on the left side of the LightOn device will keep blinking, every 15 seconds. This is the Power Indication, which means that the device is "alive" and the batteries are good.
- 3) Switch your mobile phone to Vibration mode. If there are multiple vibration modes, please choose the mode that uses the strongest and longest vibration time.
- 4) Put your phone into the LightOn cradle. You are now ready to go!
- 5) Once a new message or incoming call arrives, it triggers the LightOn product, which in turn starts blinking with strong Blue lights.
- 6) The blue indication lights will blink for two minutes, after which the frequency reduces, in order to save battery life.
- 7) As soon as you pick up your phone, press the "Reset" button at the front of the device, in order to stop the lights. The "Reset" button is the small Horizontal lever at the front of the LightOn device.
- 8) Please use the connection socket in order to connect to external triggering systems (optional – check with your distributor the exact required model)

Vibrate → Blink → Reset
